**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/789,228	FARRADAY, WALLIS WIREMU TOATAUA	
	<b>Examiner</b>	<b>Art Unit</b>	
	Brandon Jackson	3772	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 02 August 2007.
- 2a) This action is FINAL.                            2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 12-22 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 12-22 is/are rejected.
- 7) Claim(s) 12 is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Paper No(s)/Mail Date _____	6) <input type="checkbox"/> Other: _____

## **DETAILED ACTION**

This action is in response to arguments filed 8/2/2007. Currently, claims 12-22 are pending in the instant application. Claims 1-11 and 23 have been cancelled.

### ***Allowable Subject Matter***

The indicated allowability of claims 12-22 is withdrawn in view of the newly discovered reference(s) to Vanden (US Patent Application Publication 2003/0114783) and Caspers (US Patent 5,571,208). Rejections based on the newly cited reference(s) follow.

### ***Claim Objections***

Claim 12 is objected to because of the following informalities: "a cast forming gauze" is used twice and "the cast" is used. It is unclear whether Applicant is referring to two different casts or cast layers or merely one cast. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 12 -15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Caspers (US Patent 5,571,208) in view of Kania (US Patent 5,830,237), Vanden (US Patent Application Publication 2003/0114783), and Schon et al. (US Patent 6,368,357). Caspers discloses a method of dressing a post-operative residual limb (12) comprising applying a liner (90) on a residual limb (12), covering a the liner (90) with a protective covering (50), placing a spacer (42) around the residual limb (12) prior to applying the cast forming gauze (54); wherein the spacer is remove prior to using the device. It is well known in the art that the plaster of Paris used is gauze with a material that hardens after water is applied. The soft tissue or residual muscle tissue is shaped before the gauze solidifies (col. 6, lines 21-37). It would be obvious to one of ordinary skill in the art at the time of the invention to cut the cast proximate the spacer in order for the cast to fit the use without having sharp edges, this is well known in the art. Caspers fails to disclose the method including a liner that is a thermo plastic gel, the step of placing a distal pad on a distal end of the residual limb above the liner, cutting the cast along its periphery to permit removal, and securing the cast with one or more securing mechanism.

Kania teaches a removable post operative limb dressing comprising a thermoplastic gel liner (cushion liner, Figure 7A) and a protective covering over the liner (fabric liner, column 6, lines 20-25). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to replace the Caspers' liner with the thermo plastic gel liner as taught by Kania, because it is easy to manipulate and provides the user with more comfort.

Vanden teaches a method of making a hinged orthopedic device (1) comprising cutting a finished device lengthwise and hinging the device (par. 0005) forming two portions (fig. 3A), and a securing mechanism (7, 8, 9). The device cut should be a moldable material, such as plaster of paris. The device is for the arm, however it is analogous to all amputated limbs. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Casper/Kania to include the step of cutting the device to permit removal, hinging it, and securing it with a strap, as taught by Vanden, because it would allow easy application and removal of the device.

Schon teaches a therapeutic device (200) for amputees comprising a distal pad (210) at the distal end of the residual limb. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify device of caspers/Kania/Vanden to have a distal pad, as taught by Schon, in order to provide the user with more comfort and support in that weight bearing area. It would also be obvious to one of ordinary skill in the art to cut the device proximate the distal pad when cutting its periphery.

Claims 16 and 18-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Caspers (US Patent 5,571,208) in view of Kania (US Patent 5,830,237) and Vanden (US Patent Application Publication 2003/0114783). Caspers discloses a method of dressing a post-operative residual limb (12) comprising applying a liner (90) on a residual limb (12), covering the liner (90) with a protective covering (50), placing a spacer (42) around the residual limb (12) prior to applying the cast forming gauze (54); wherein the spacer is removed prior to using the device. It is well known in the art that the plaster of Paris used is gauze with a material that hardens after water is applied. The soft tissue or residual muscle tissue is shaped before the gauze solidifies (col. 6, lines 21-37). It would be obvious to one of ordinary skill in the art at the time of the invention to cut the cast proximate the spacer in order for the cast to fit the user without having sharp edges, this is well known in the art. Caspers fails to disclose the liner is thermo plastic gel, cutting the cast along its periphery to permit removal, and securing the cast with one or more securing mechanism.

Kania teaches a removable post operative limb dressing comprising a thermoplastic gel liner (cushion liner, Figure 7A) and a protective covering over the liner (fabric liner, column 6, lines 20-25). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to replace the Caspers liner with the thermo plastic gel liner as taught by Kania, because it is easy to manipulate and provides the user with more comfort.

Vanden teaches a method of making a hinged orthopedic device (1) comprising cutting a finished device lengthwise and hinging the device (par. 0005) forming two

Art Unit: 3772

portions (fig. 3A), and a securing mechanism (7, 8, 9). The device cut should be a moldable material, such as plaster of paris. The device is for the arm, however it is analogous to all amputated limbs. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of caspers/Kania to include the step of cutting the device to permit removal, hinging it, and securing it with a strap, as taught by Vanden, because it would allow easy application and removal of the device.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Caspers/Kania/Vanden as applied to claim 16 above, and further in view of Schon et al. (US Patent 6,368,357). Caspers/Kania/Vanden fails to disclose placing a pad proximate a joint and cutting the cast proximate the pad. However, Schon teaches a therapeutic device (200) for amputees comprising a distal pad (210) at the distal end of the residual limb. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the Caspers/Kania/Vanden device to have a distal pad, as taught by Schon, in order to provide the user with more comfort and support in that weight bearing area. It would also be obvious to one of ordinary skill in the art to cut the device proximate the distal pad when cutting its periphery.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Boone (US Patent 4,465,064).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon Jackson whose telephone number is (571)272-3414. The examiner can normally be reached on Monday - Friday 8-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia Bianco can be reached on (571)272-4940. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
